DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 72-82, 88 and 90 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wang in view of Matsushima et al.

There is disclosed in Wang a rotisserie oven for cooking food, comprising: an enclosure 1 having a roof 5a, a wall 5 and a curved section extending from the wall to the roof; a heating element 12, 27 inside the enclosure; means 17, 25 for rotating the food about a horizontal axis and by the heating element (see figure 4); and a vent (see figures 2, 6) located in the curved section.

There is disclosed in Matsushima an oven for cooking food, comprising: an enclosure 1 that includes walls; a heating element 5, 6 inside the enclosure; means 25, 26 for rotating the food by the heating element; and a plurality of vents (louvers) 22a, 22b, 38a, 38b located in one of the walls or the enclosure, the vents having an indent extending into the enclosure with an opening at the top of the indent.

It would have been obvious to one skilled in the art to modify the vents of Wang with that taught by Matsushima, in order to improve the efficiency of the vents and prevent damage to structure holding the oven.

Art Unit: 1761

In regards to claims 74 and 76, the movement of air within the oven enclosure is seen as a method step and fails to describe any structural arrangement.

Response to Arguments

Applicant's arguments with respect to claim 72 have been considered but are moot in view of the new ground(s) of rejection.

The addition to claim 72 of the limitation of a horizontal axis about which food rotates, has been considered and found to be taught in the prior art reference of Wang. Wang discloses a horizontal rotary support member 25 for moving food past a heating element. In regards to claims 88 and 90 the rejection is the same as presented in the prior office action.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
